

# Climate Change and Girls' Education Deserves Urgent Attention

Quality education is a girl's lifeline to a brighter future, as is a greener, fairer future

## The connections between climate change and girls' education

Education equips girls with the knowledge they need to respond to climate-related disasters. Contributions made by educated girls to their communities' resilience to climate-related disasters.

Girl's education raises awareness of climate change vulnerability and the role of gender inequality is one method of preparing young people to fight for climate justice. Girls who are educated grow up to be women who fully participate in society.

1

Educate girls

2

- Improve local economy
- More people contributing
- Slow down overpopulation

3

Ameliorate Climate change

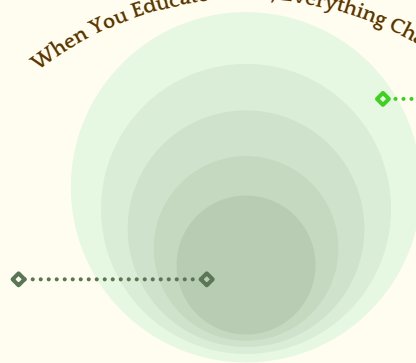

## These issues have both negative and positive relationships, as well as dependencies

The negative consequences of climate change are not distributed evenly. Girls are frequently the first to drop out of school to help their families earn money, do household chores, or care for their brothers and sisters. They are less likely to learn about climate change.

Contributing to the widening of gender inequalities, and lacking the knowledge to engage in climate change responses.

### When You Educate A Girl, Everything Changes

The positive relationship between climate change and girls' education is that it has the potential to provide girls with the skills, knowledge, and critical thinking needed to engage in appropriate climate change responses and solutions, paving the way for a more environmentally responsible society.

When all women and girls have equal access to education and resources, they can become powerful advocates for climate action.

## How climate change is affecting girls more than others in Thailand

Climate change exacerbates gender inequalities that are deeply ingrained in their social lives.

Climate change impacts include rising sea levels, rising temperatures, and an increase in extreme weather events such as severe floods, out-of-season droughts, and heatwaves.

Girls skip school to work in fields.

Girls that have quality education have a great potential to equip girls with skills, knowledge, and critical thinking to engage in appropriate responses and solutions to climate change.

Girl's education raises awareness of climate vulnerability and the role of gender inequality as a means of equipping young people with the necessary skills to fight for climate justice and to build resilient communities capable of adapting to the effects of climate crises and making the world a better place for a brighter future, as is a greener, fairer future.

Girls married off to older men and never return to school.

Girls are taken out of school to save money for food.

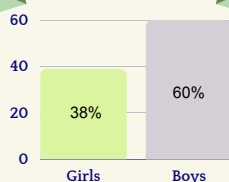

Girls are more likely to go hungry and will often eat the least and last, leading to hunger and malnutrition.

It's not possible to address climate change without addressing gender equity and a whole range of other injustices and inequalities.

Education encourages girls to be environmentally responsible and to take a leadership role in environmental issues in their communities.

### Education

Educating girls, on the other hand, could result in a massive 51.48 gigatonne reduction in emissions by 2050.

Introduce girls to life skills, climate change through society.

Encourage girls to share their ideas and activities that will help them, be civically aware and active, their families, and their communities to be more resilient.

One powerful catalyst for rapid change is the education of girls.
